

ICOL in Coast Colour

R. Santer, A. Ruesca, O. Danne, C.
Brockman and O. Aznay

Motivation

Eutrophication is near the coast line
Where the adjacency effects are

The two reflections: description

Isotropic reflection
by the land and water

In the NIR, between B12 and B13,
the land -water contrast is almost white:
bare soil, sand, vegetation, snow
have a little spectral dependence

Specular reflection
Mainly by the water

The Fresnel reflection is white

The adjacency effect: the scattering

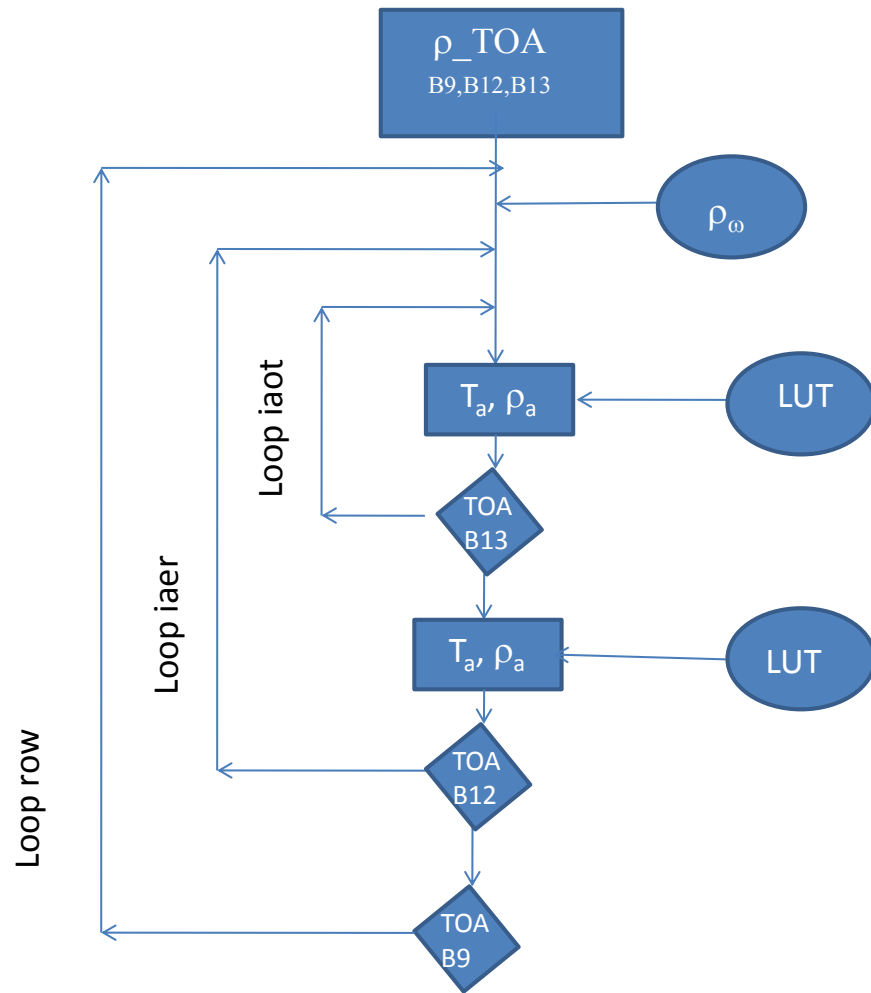

Isotropic reflection:
Proportional to the diffuse
irradiance

Specular reflection
Proportional to a radiance

Proportional to the optical thickness

Main outlines

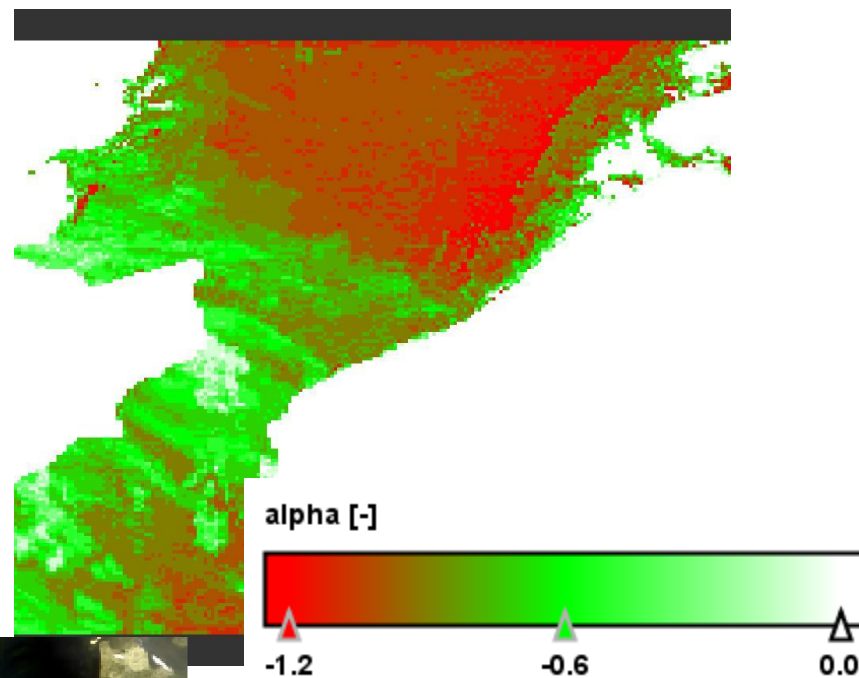

- Retrieval of the aerosol model: principle and illustration
- Validation of the aerosol model
- Influence of ICOL on the L2 water product
- ICOL at L2

ICOL Processing Results

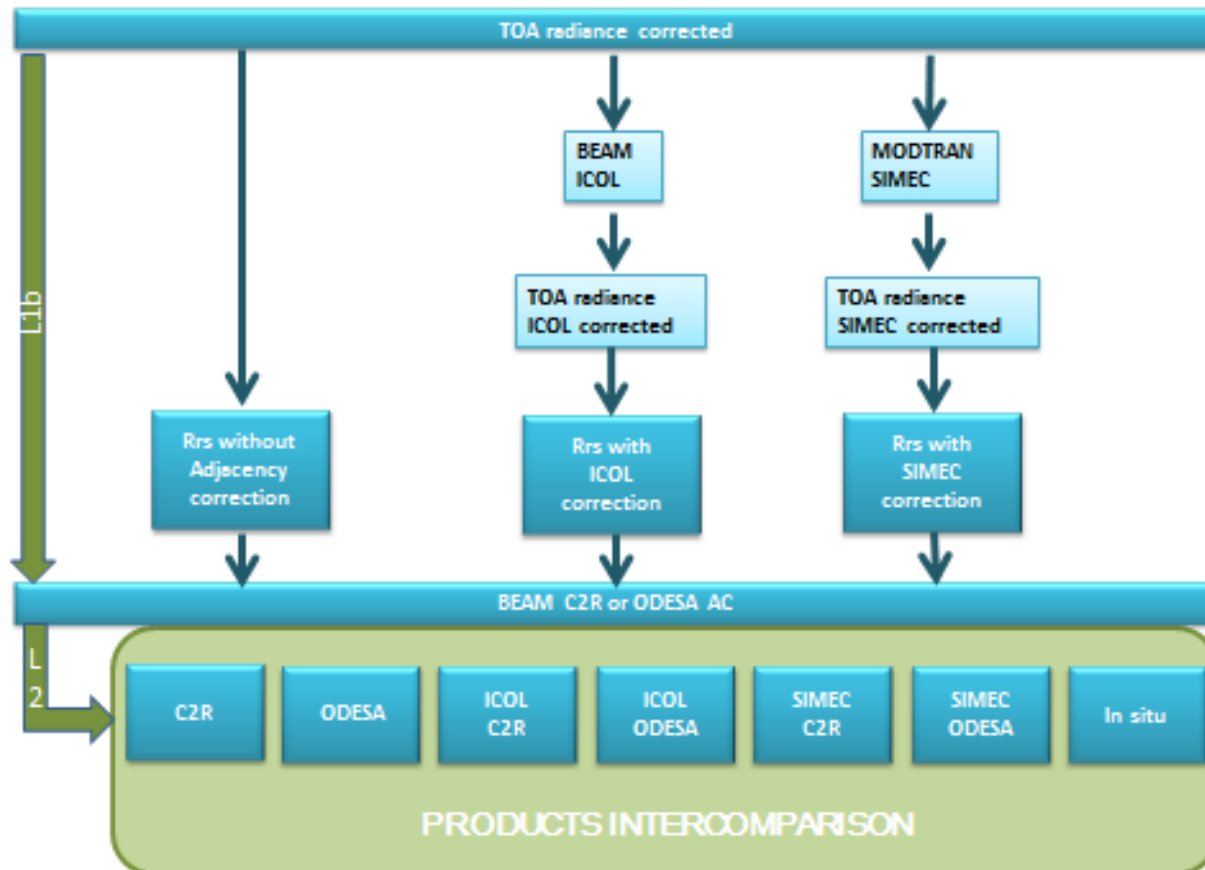

The adjacency effect: illustration on the aerosol product

Main outlines

- Retrieval of the aerosol model: principle and illustration
- **Validation of the aerosol model**
- Influence of ICOL on the L2 water product
- ICOL at L2

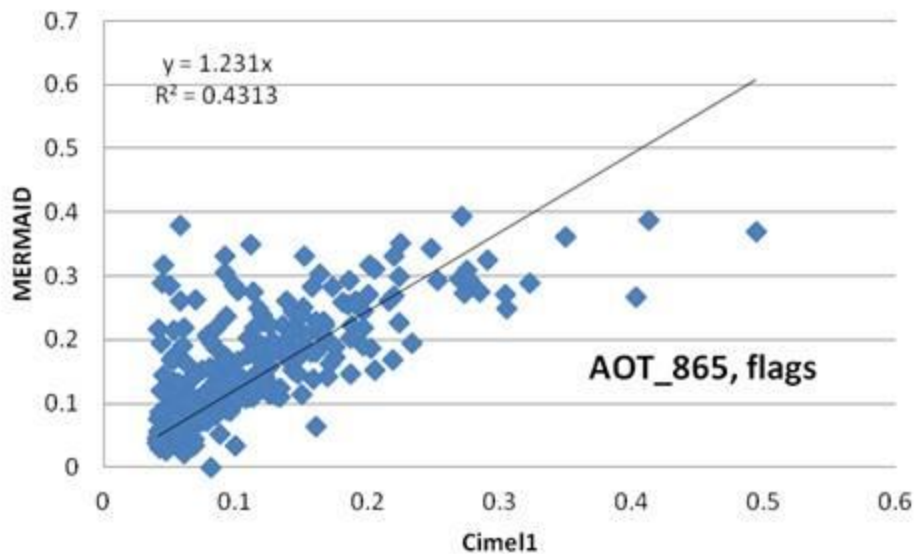

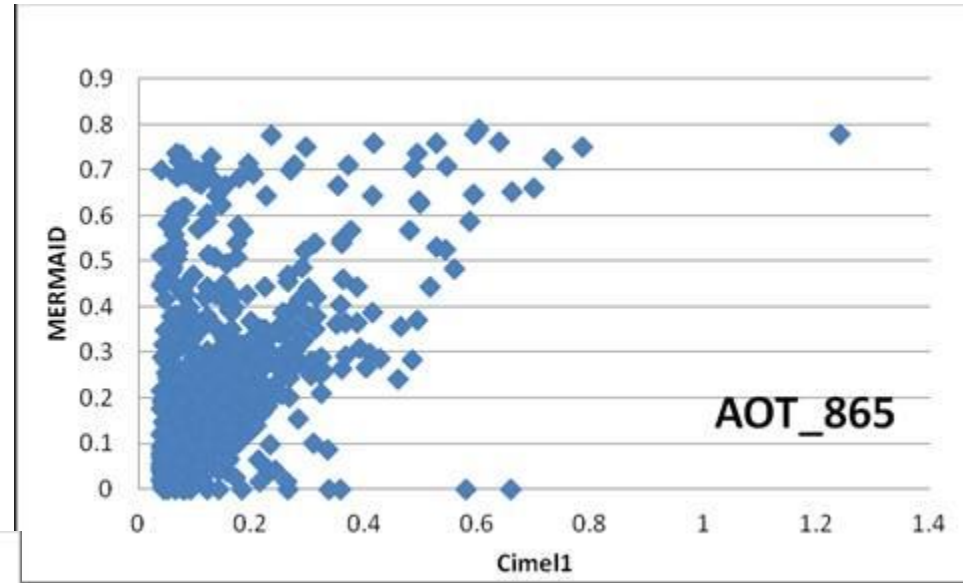

The intercomparison game

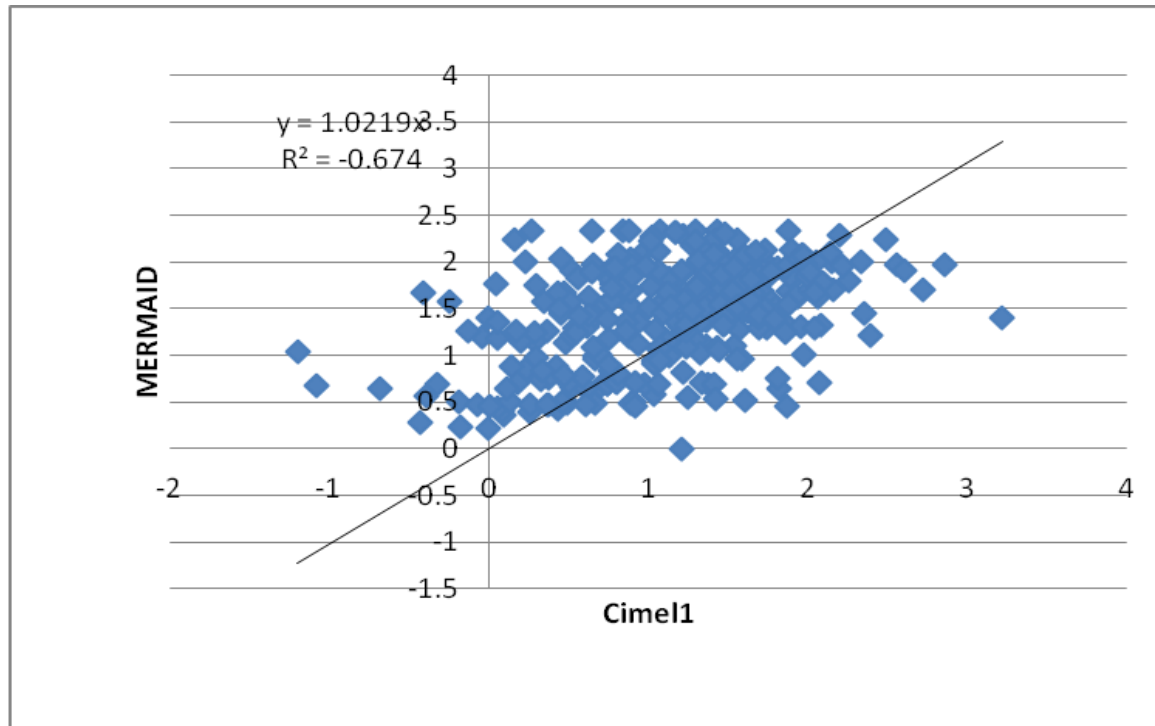

AERONET in MERMAID

Conclusion 1 on ICOL aerosols

- ICOL is doing qualitatively what we expect:
 - Making the aerosol homogeneous at coast line
 - Going in the right way compared to MEGS
- ICOL is doing quantitatively what it can:
 - A first reasonable comparison with AERONET
- What next:
 - More validation with AERONET (AERONET in a MERIS data base)
 - Analyse the impact of the clouds

Main outlines

- Retrieval of the aerosol model: principle and illustration
- Validation of the aerosol model
- Influence of ICOL on the L2 product
- ICOL at L2

ICOL and the water reflectance

ratio_rhow_b5 □

Ratio Rhow_B5(with/without)

ICOL and the Chla1

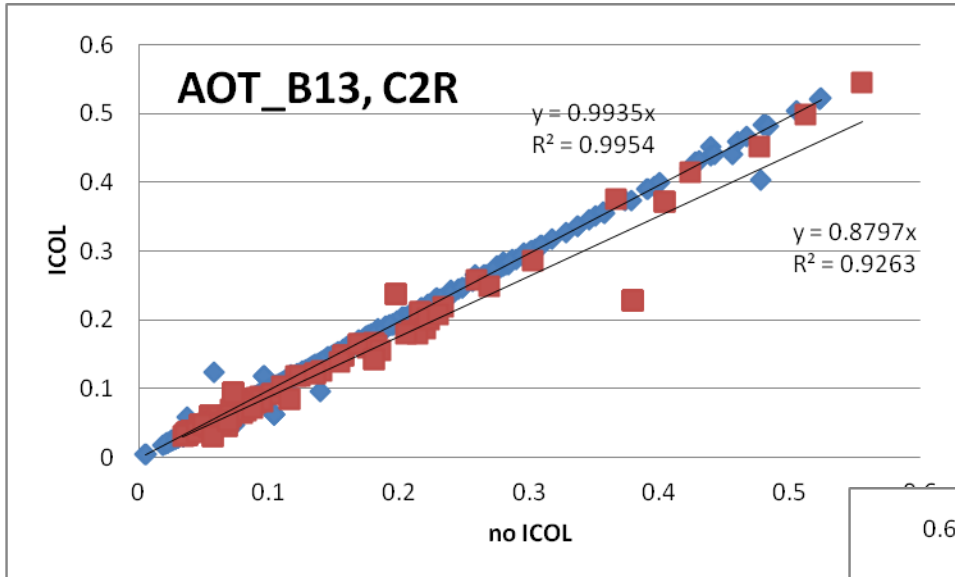

Difference in chlorophyll_a (without ICOL-with ICOL)

delta_chi □

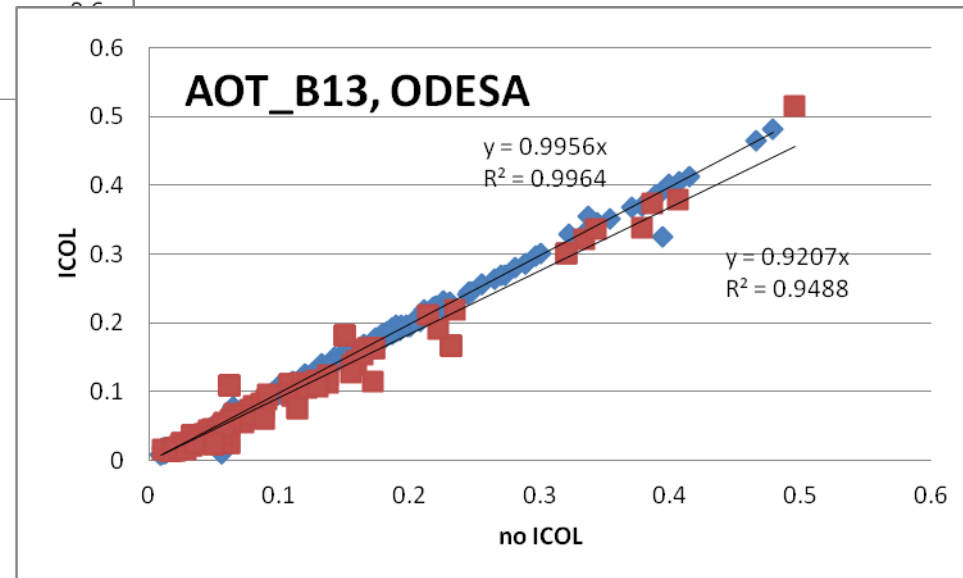

The C2R AOT

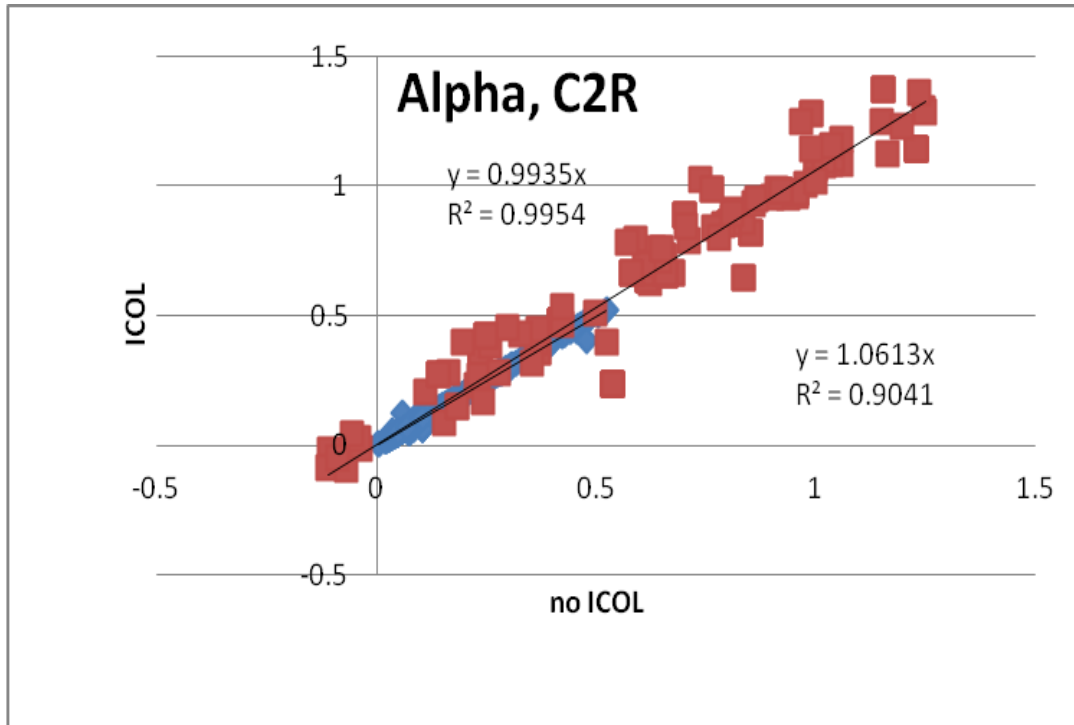

Blue: Rayleigh
Red=Rayleigh+aerosols

No Rayleigh impact
Aerosol correction goes
in the right way

The C2R Angstroem

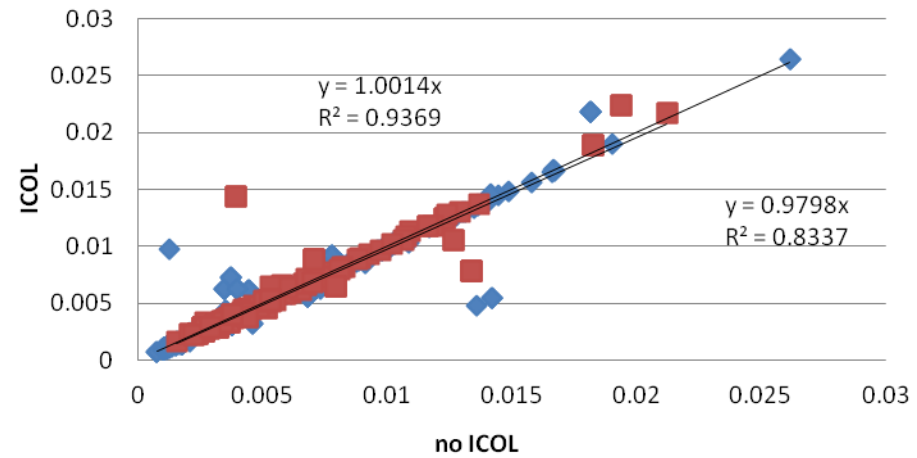

The land water contrast does not change much between B12 & B13 $\Rightarrow \alpha$ is stable

Water reflectance

Rhow, B2, C2R

Rhow, B5, C2R

- Very small impact

ICOL lambertian indicators

$$\begin{aligned} \langle LF_R \rangle &= \tilde{L}F \otimes \tilde{W}_R \gg \text{Land_AE_Ray} \\ \langle LF_a \rangle &= \tilde{L}F \otimes \tilde{W}_a \gg \text{Land_AE_aer} \\ \langle CF_R \rangle &= \tilde{C}F \otimes \tilde{W}_R \gg \text{Cloud_AE_Ray} \\ \langle CF_a \rangle &= \tilde{C}F \otimes \tilde{W}_a \gg \text{Land_AE_Ray} \end{aligned}$$

$\langle LF_R \rangle$	$\langle CF_R \rangle$	$\langle LF_a \rangle$	$\langle CF_a \rangle$
0.044	0.011	0.028	0.004

Conclusion 2 on ICOL L2

- ICOL impacts on the L2 product
- Useful to know if ICOL is needed for the validation, through:
 - Simple ICOL indicators
 - Analysis of L2

Main outlines

- Retrieval of the aerosol model: principle and illustration
- Validation of the aerosol model
- Influence of ICOL on the L2 product
- **ICOL at L2**

Present status of ICOL

- If ICOL correctly models the AE
- If we can correctly retrieve the aerosols
- ICOL can made the atmospheric correction

ICOL to be done

- Need to use more accurate LUTs (the forward model)
- Need to implement and check a new algorithm
